Total = _____

Thanks for supporting your local conservation district!

For office use only: receipt # _____ paid _____ outstanding balance _____

Stock Codes:

1-0 bareroot– Grown in seedbed for one year. They represent the smallest stock type and therefore the easiest to plant correctly, however, plan for some weed control.

2-0 bareroot– Grown two years in seedbed. They are bigger and better able to compete with surrounding vegetation and can withstand light to moderate browsing by wildlife.

P-1– This is a plant that was grown for one season in a greenhouse in a plug tray, then transplanted into a transplant bed for 1 season. A plug-1 has a larger root system, and is more survivable and vigorous. They are also more expensive.

Plug– Container grown in greenhouse for one year. Roots still encapsulated in soil. Similar to 1-0 stock in terms of planting ease, competition with surrounding vegetation, and susceptibility to browsing.
