

LET'S WORK TOGETHER

We want to work with you!

Many of Chelan County's water ways are surrounded by private property.

It is our mission to work with all

Chelan County residents to conserve soil and water resources.

No property is too big or too small!

Riparian Habitat Restoration

Cascadia Conservation District is a local hub of natural resource funding & expertise for all people in Chelan County.

We are non-regulatory.
We work in partnership with willing landowners and community members to conserve natural resources.

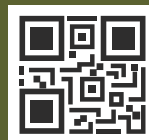

We provide funding and expertise that empowers people to practice conservation where they are.

What types of projects do we do?

- Planting Native Trees and Shrubs
- Livestock Exclusion Fencing
- Wetland Restoration
- Legacy Trash Removal
- Pollinator Habitat Enhancement
- Restore in-stream habitat
- Noxious weed control

Check out some of our past projects!

What is Riparian Habitat?

Riparian areas are the transition zones between land and water environments. These transition zones are very important to wildlife and human communities as they protect the adjacent waterbody and perform many important functions.

They Stabilize Shorelines - Trees and shrubs help hold the soil along streams and lakes, preventing banks from collapsing and eroding during periods of high water.

They Reduce Downstream Flooding - Trees and shrubs absorb runoff, letting water soak into the soil, recharging the groundwater which can help to prolong streamflow throughout the year.

They Improve Water Quality - plants filter out sediment, excess nutrients, pesticides, pathogens, and other pollutants before they enter the water.

Enhance wildlife habitat - Trees and shrubs provide habitat and food for fish, birds, and many other wildlife.
